EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 1, line 1, delete "((First Amended))"

Claim 1, line 26, delete "(space)"

Drawings

2. The drawings filed on 12/23/2003 are accepted by the Examiner.

Allowable Subject Matter

3. Claims 1-2 are allowed.
4. The following is an examiner's statement of reasons for allowance: The prior art of record does suggest many of the individual steps. For example, the prior art does suggest manufacturing an enclosure for a preselected set of speaker drivers, said enclosure having any preselected external shape and including internal cavities and channels formed to enhance the ability of the drivers to reproduce sound with preselected characteristics. Goldslager (either US Patent 6,763,117 B2 or US

Art Unit: 1734

2003/0063766 A1) suggests manufacturing such items by utilizing a "plurality of cavity forming layers" which are equivalent to the selected layers. These selected layers are developed from machining patterns (see columns 7-9 of US Patent 6,763,117, especially column 9, lines 10-23) which can be considered equivalent to the claimed base templates. In columns 7-8, Goldslager discloses the design of the walls of the selected layers in terminology that is analogous to the design of the base templates in the claims. Additionally, Goldslager recites manufacturing crossover networks (items 47 and 67). However, there is a critical difference between Goldslager and the claims - Goldslager, while disclosing machining patterns, i.e., base templates, does not suggest some of the substeps, such as the step of outlining circumferential edges of internal supports to strengthen and stabilize the enclosure, the placement of the internal supports being selected whereby the drivers may be fully inserted within the enclosure. Goldslager also does not disclose the technique for attaching the layers together, and does not suggest the combination of both rods and adhesives as the layer joining mechanism.

Monson (US Patent 5,900,594) discloses some of the deficiencies in Goldslager, for example, bonding the layers by glue (see column 2, lines 50-61). However, there is no suggestion of any of the base template design steps (outline circumferences, guide holes, etc) or the use of reinforcing rods along with adhesive bonding.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
